

# Release Notes

## Video System Manager (VSM) Version 1.2

Last update: 16 August 2005

### Introduction

This document provides a brief description of the significant feature updates that appear in the new release of the Video System Manager. For additional details, refer to the *Video System Manager User Guide*.

**Note:** *Ethernet Switches for sPDS-480ca*

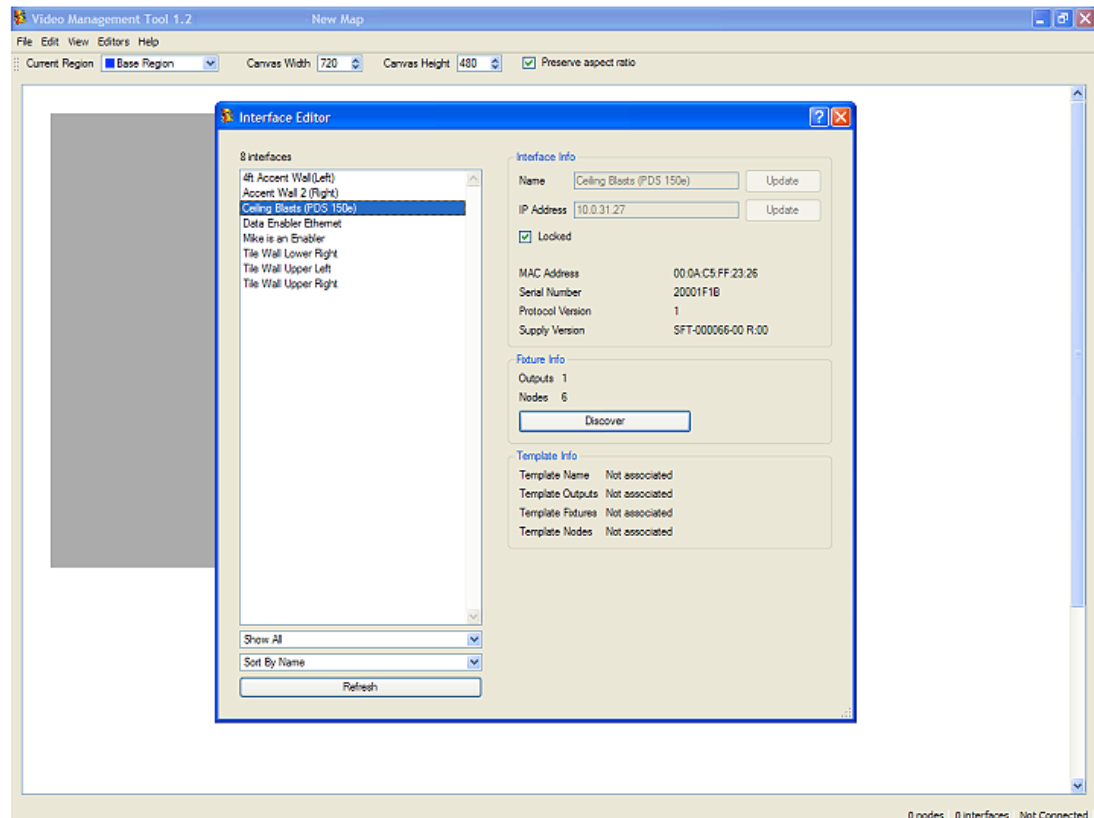

Color Kinetics requires gigabit Ethernet switches for the entire switch hierarchy for all sPDS-480ca installations.

### Video Management Tool

The Video Management Tool contains several new features and dialogs that are defined in this section.

#### Redesigned Interface Editor

The Interface Editor now provides more information, allowing you to modify supply details such as Supply Name and IP Address by unlocking and updating.

## Support for the sPDS-480ca Power Supply

The Video Management Tool provides support for Color Kinetics new sPDS-480ca Power/Data Supply.

## Fixture Highlighting In the Supply Editor

You can now drag an interface into the Supply Template Editor and associate it with the template. For additional information, refer to the *Video System Manager User Guide*.

## Video System Engine

The Video System Engine now includes a new hardware configuration that you can purchase that provides rackmount and LCD controls on the front panel.

## General Notes Regarding Version Compatibility

- Version 1.2 maps cannot be used on a version 1.0 system.
- Version 1.0 maps can be used on a version 1.2 system. The download web page will warn of an incompatible map version. You will need to update the map via the web page.
